The Cost Effective Wound Closure Solution

A safe and effective method for rapid and secure wound closure with LiquiBand® Standard

The No.1 Cyanoacrylate Skin Adhesive used within A&E Departments and Ambulance Trusts in the UK

www.liquiband.com
**LiquiBand® Standard** is suitable for use on minor wounds where the edges approximate readily and where the wound is not under tension. Wounds under tension need to have appropriate subcutaneous sutures placed prior to adhesive application. **LiquiBand® Standard** seals the wound and removes the need for dressings.

**Advantages for the Patient**
- Reduced trauma
- Excellent cosmetic results
- Suitable for scalp wounds
- Protection against infection
- Non-invasive
- No suture removal

**Peace of mind for the Clinician**
- Precise application
- Aids treatment times
- Avoids needlestick injury
- Useful with unco-operative patients
- Strong and secure results
- Cost effective

When assessing a wound for treatment with **LiquiBand® Standard** the following considerations should be made:
- Mechanism of Injury
- Site of Injury
- Time of Injury
- Place of Injury

NICE Guidelines* state that topical skin adhesives are cost effective and efficacious.

**Versatile indications**
**LiquiBand® Standard** is indicated for low tension wounds on scalp, face trunk and limbs where the wounds are easily approximated and where the wounds are NOT under tension. **LiquiBand® Standard** seals the wound and removes the need for dressings. **LiquiBand® Standard** provides excellent cosmetic results and requires no return visit for removal.
